

## Desktop Triage

Most advanced on-site computer field kit for Windows system. User-friendly interface helps you collect digital evidence for all cases in the first place.

Include all essential functions of traditional digital forensics: Screens recoding, artifacts collection, live search and process documenting. Shorten the investigation time from weeks to just a few minutes!

## Main functions

Enhanced WIndows PSR and Screen Recorder to document whole forensics process on computer screen, avoiding any ambiguity and serving as key element of Chain of Custody.

Automatic scroll to capture screens of social media and websites on site, ensuring the collection of evidence which can only be seen on the field to guarantee most complete investigation.

Acquire critical files and pack them to a zip as the mini–image represent the target disk, which contains most of the artifacts and compress the time cost of collection to a very short period, saving time from the full imaging process.

On-site collection of over 35+ key Windows artifacts in just a few minutes, including security, application, and other related event logs. For registry category, we have all the essential ones (Prefetch, Shellbags, RecentFile, UserAssist, etc.)

LiveSearch function collects all the file information from both physical and logical disk, targeting the existence of suspicious and critical files. By identifying the related files, investigators could copy and export the data, keeping the key evidence.

6

Our report targets the promise of evidence admissibility and customization. By selecting the contents desired, investigators could generate reports according to the requirements of cases.
